- The UO Facilities Fact Sheet is now available

- for FY21, there was a significant increase in the amount of materials diverted from the landfill to recycling and composting facilities. This increase was due in part to the implementation of new recycling and composting programs on campus. In addition, the University continued to focus on reducing waste generation and improving recycling rates.

- The University of Oregon has a waste reduction goal of diverting at least 70% of all materials from the landfill by the end of FY23. To meet this goal, the University is implementing a variety of initiatives, including but not limited to, increasing recycling and composting rates, reducing waste generation, and encouraging sustainable purchasing.

- In FY22, the University diverted 52% of all materials from the landfill. This is a significant increase from FY21, where the diversion rate was 47%. The University attributes this increase to a variety of factors, including increased recycling and composting rates, improved waste tracking, and a focus on reducing waste generation.

- The University of Oregon is committed to reducing its environmental impact and improving sustainability. The UO Facilities Fact Sheet is a valuable resource for anyone interested in learning more about the University's sustainability initiatives and progress.
