The Center for Industrial Research and Service (CIRAS) seeks to make Iowa better by educating its businesses about the latest technology and processes, and innovations. Among other things, the new machines will allow the lab to produce prototypes for Iowa companies looking to experiment with new designs. Two new 3D printers will give the lab greater flexibility to produce detailed models and prototypes.

Chris Hill, director of the CIRAS Technology Assistance Program (TAP), said that in the coming month. For a complete listing of events, go to the CIRAS website or contact them directly. The lab has already seen an increase in demand for services, particularly in the area of 3D printing.

Food manufacturing is complicated. Wouldn’t you like some help navigating the complexities of this world? If so, consider attending the monthly Food Talks, a new forum for food manufacturers. These monthly events will bring together manufacturers to collaborate and exchange ideas. The next event is only two weeks away, so don’t miss out! Learn more about Food Talks and other events happening right now by signing up for the CIRAS eNews.
