A transformation year

Jennifer Salerno

What a difference a year makes!

It was a challenging year for all of us. Pandemic, remote learning, career changes, home offices, and countless other changes. Yet we persevered and are making progress.

Jennifer Salerno is the Environmental Science and Policy Assistant Professor at George Mason University. Her research specializes in environmental microbiology and coral reef ecology. She currently focuses on the distribution of soil microorganisms and is working to develop a method for monitoring soil microbial populations.

Research & Discovery

Mason scientists receive funding for research on earth observation and artificial intelligence

Mason scientists receive funding for research on earth observation and artificial intelligence. Two awards have been announced recently, one for research on earth observation and another for artificial intelligence.

Events

Mason's Equinox Explorers Club for K-3 is running activities online during the Halifax Summer School. Register today to join the fun and learn about space, nature, and more!
