pressing sustainability and resilience challenges. Water security.

The Symposium will convene key stakeholders to explore the skills, knowledge and attitudes necessary for effective water resource management by addressing the underlying causes of soil biodiversity loss and enhancing the capacity to respond to these challenges. The Environmental Engineering Program is providing the research has a clear objective of protecting human and ecological health. Integral to achieving these goals is a fundamental understanding of the transport and fate of chemical, biological, and physical constituents from various sources and over different temporal and spatial scales. The Division of Environmental Biology (DEB) at the National Science Foundation is providing funding for research in the areas of evolutionary and ecological processes acting at the level of populations, species, communities, and ecosystems. DEB has a strong commitment to strengthening the connection between research and public policy through direct interaction with Smithsonian leaders, and members of Congress. The Office of Science of the US Department of Energy's Financial Assistance Program is supporting the high-impact research-transition funding requests aligned with the U.S.-EU Energy Week. This program supports the development and testing of advanced nuclear fuels and materials, nuclear materials safeguards and nuclear waste management technologies, and fusion energy research. The Office of Energy Efficiency and Renewable Energy is providing funding for research related to energy efficiency, renewable energy, and energy storage. The Office of Nuclear Energy is providing funding for research related to nuclear fuels and materials, nuclear materials safeguards and nuclear waste management. The Office of Science and Technology Policy is providing funding for research related to climate change and environmental sustainability. The Office of Social, Economic, and Technical Systems is providing funding for research related to environmental sustainability and resilience. The Office of Science of the US Department of Energy has a strong commitment to strengthening the connection between research and public policy through direct interaction with Smithsonian leaders, and members of Congress. The Office of Science and Technology Policy is providing funding for research related to climate change and environmental sustainability.
