to facilitate information sharing among researchers, practitioners, and relevant local, national, and international communities.

The Institute for a Sustainable Earth (ISE) at George Mason University

The ISE Newsletter provides up-to-date information on conferences, funding opportunities, and research developments in implementation science that can strengthen institutional capacity to enhance sustainable development. The ISE newsletter also highlights upcoming events and important research initiatives.

The main objective of the Symposium is to address critical knowledge gaps and promote new research directions needed by water professionals and institutions. The meeting will also study how new knowledge to design new processes, materials, and devices from a systems-level perspective. Projects should be compelling and reflect sustained, coordinated efforts from interdisciplinary research teams.

The meeting will also study how new developments in implementation science can strengthen institutional capacity to enhance water security.

The Global Symposium on Soil Biodiversity will be held in Arlington, VA, on March 10-12, 2020. The meeting aims to provide a forum for researchers, practitioners, and stakeholders interested in soil biodiversity to share knowledge and collaborate on research initiatives.

The Office of Science of the US Department of Energy (DOE) is pleased to announce the availability of a new funding opportunity within the Division of Environmental Biology. The funding opportunity is designed to support research that advances our understanding of the transport and fate of contaminants in the environment. Proposals should be submitted to the core clusters (Ecosystem Sciences, Evolutionary Biology, and Environmental Biology).
