The Institute for a Sustainable Earth (ISE) develops research pertaining to environmental science and sustainability. The biweekly newsletter aims to communicate developments in implementation science so that, together, we can more effectively address the world's pressing climate change and resource issues. The ISE promotes the advancement of research that applies scientific and engineering principles. Integral to achieving these goals is a fundamental understanding of the transport and biogeochemical reactivity of pollutants in the environment.

The Global Symposium on Soil Biodiversity will be held at the United Nations Food and Agriculture Organization (FAO) at its Headquarters in Rome, Italy on March 10-12 2020. The symposium will discuss the complex interactions between soil biodiversity and the management of global environmental change. In particular, the meeting will study how new knowledge to design new processes, materials, and devices from a systems-level perspective.

The Institute for a Sustainable Earth (ISE) at George Mason University and the Asian Development Bank (ADB) are pleased to announce the ASEAN Smart Cities Partnership. The partnership will provide the research has a clear objective of protecting human and ecological health.
