The ISE Newsletter provides up-to-date information on conferences, funding opportunities, and pressing sustainability and resilience challenges. Businesses and organizations–so that, together, we can more effectively address the world's sustainability challenges.

The Institute for a Sustainable Earth (ISE) at George Mason University is committed to promoting sustainable practices and policies through research, education, and collaboration with stakeholders across the community and beyond. The ISE focuses on developing solutions to complex environmental issues, fostering innovation in sustainability, and preparing the next generation of sustainability leaders.

The Symposium will convene key stakeholders to explore the skills, knowledge and attitudes necessary to drive sustainable change in the water sector. The capacity for the water sector to implement sustainable practices is directly linked to the development of solutions to challenges such as water scarcity, pollution, and climate change. The African Development Bank and other development partners are preparing the Capacity for the Water Sector Symposium, which will be held on [Date].

The main objective of the Symposium is to address critical knowledge gaps and promote the development of recommendations for implementing sustainable practices in the water sector. By bringing together experts from academia, government, civil society, and industry, the Symposium aims to facilitate the exchange of ideas and best practices, and to strengthen institutional capacity to enhance water security.

The Office of Science of the US Department of Energy has announced the FY 2020 Solicitation for the Office of Science, China's Sustainable Energy Research (CSE). The solicitation aims to support research that applies scientific and engineering principles to address critical energy challenges, such as energy efficiency, renewable energy, and nuclear energy. The solicitation is open to proposals from research teams that reflect sustained, coordinated efforts from interdisciplinary disciplines.

Projects should be compelling and reflect sustained, coordinated efforts from interdisciplinary teams. The solicitation is open to proposals from research teams that reflect sustained, coordinated efforts from interdisciplinary disciplines. The Office of Science of the US Department of Energy has announced the FY 2020 Solicitation for the Office of Science, China's Sustainable Energy Research (CSE). The solicitation aims to support research that applies scientific and engineering principles to address critical energy challenges, such as energy efficiency, renewable energy, and nuclear energy. The solicitation is open to proposals from research teams that reflect sustained, coordinated efforts from interdisciplinary disciplines.

The National Oceanic & Atmospheric Administration (NOAA) Marine Debris Program (MDP) is seeking proposals for the 2020 Marine Debris Research Grants Program. The program supports research into coastal and marine debris, with the goal of reducing the impact of debris on the nation's marine environment, and coastal economy, as well as ensuring navigation safety.

The first lecture will be delivered by [Speaker]. In addition, working groups were established to address curriculum development, university sustainability, hunger, and health. Furthermore, participants discussed the strategies, indices, and efforts that need to be implemented to address sustainable development initiatives at the local, state, and regional levels in the United States. The Institute for a Sustainable Earth (ISE) at George Mason University was led by SDSN USA co-chairs Jeffrey Sachs, Dan Esty, and Gordon McCord. Participants agreed to support the US Goals (SDGs).

The study of soil biodiversity is crucial for understanding the functioning of ecosystems and for developing sustainable agricultural practices. The Global Soil Biodiversity Initiative is an important initiative that seeks to enhance our understanding of the role of soil biodiversity in ecosystem processes, and to develop strategies for conserving and sustainably using soil biodiversity.

The Institute for a Sustainable Earth (ISE) at George Mason University is pleased to announce the Global Sustainability Scholars Program. This program is designed for young professionals and/or graduate students from under-represented groups in sustainability. The program aims to provide opportunities for professional development, networking, and leadership skills. The program is open to students from a variety of disciplines, including environmental science, economics, and public policy.

The program. To apply, visit [Link]. GSS Fellows are embedded within an international sustainability research project for 10 weeks and receive training in research and leadership skills.
