ISE NEWSLETTER encourages the submission of certain types of proposals to appropriate existing NSF core developments. The opportunity to perform translational research and technology development, catalyze forward-thinking research that will demonstrably aid in the Nation’s goal of reaching net-zero sustainability. NSF Critical Aspects of Sustainability (CAS): Innovative Partnerships for Innovation (PFI) projects strengthen and expand the scientific and technical capabilities of both parties. The solicitation is for collaborations between Oak Ridge Associated Universities researchers and faculty. Proposals should consider diverse notions of sustainability and propose sustainability across all levels of the entire computing stack from hardware to networking to software applications. The recently issued Dear Colleague Letter (NSF 2022-60) encourages the submission of novel and high impact proposals that advance computing. It is a research and development program designed to support research and development at universities and institutions of higher education. Proposals submitted to this solicitation should address the theme of Systems of Sustainable Consumption and Production. The opportunity supports communities to develop solutions to resilience challenges. C-RASC engages scholars, students, practitioners, and relevant local, national, and international organization.
