The ISE Newsletter provides up-to-date information on conferences, funding opportunities, and pressing sustainability and resilience challenges. Recently, a webinar titled "Measuring Food Insecurity in the Era of COVID-19" was sponsored by the Global Innovation Fund. The webinar aimed to discuss practical insights from data collection activities in four global contexts, including India, Ethiopia, Costa Rica, and Indonesia. 

Limited submission funding opportunities are available to Mason researchers. These funding opportunities limit the number of submissions per institution and require an internal submission process. Mason's Office of Research has organized a detailed database of funding opportunities available across various programs, including the National Science Foundation, the National Geographic Society, Microsoft's AI for Earth Program, and others. The database is updated regularly to reflect new opportunities and deadlines.

One of the significant opportunities is the GMUF/Pandemic Religion Project, which aims to connect members of the Mason community and the wider academic network. The project is providing funding for research in the following program areas: Advanced Scientific Computing Research, Basic Energy Sciences, and Social Science Research. The NextGen Grant offers the potential to help reverse global warming. The Committee will give strong consideration to proposals that align with the project's mission.

Furthermore, the University of Basel is coordinating a meeting with the theme "Health and Medicine, Mobility, and Transport," focusing on sustainability and resilience in the wake of the COVID-19 pandemic. The meeting will include discussions on health and medicine, mobility, and transport in the context of sustainability and resilience. The University of Basel is working in partnership with the International Science Federation (ISF) to foster discussions on sustainability and resilience.

The MIC Research Committee is co-chaired by Dr. Aurali Dade, Associate Vice President for Outreach and Engagement, and Colleen Vesely, Associate Vice President for Community Engagement and External Relations. The committee is organizing a series of webinars and seminars to provide practical insights and engage with professionals in various fields. The webinars cover topics such as global health, sustainability, and resilience. The webinars are designed to facilitate information sharing among researchers, practitioners, and relevant local, national, and international partners.
