C&D; Biomass is a Renewable, Sustainable Energy Source

With a new administration coming into Washington DC, there is much uncertainty over what will be the renewable energy policies and the Department of Energy and the Environmental Protection Agency (EPA) positions. It is believed that a new administration will try to roll back most if not all of the Obama administration's clean energy initiatives. One of the new administration's priorities is to attempt to minimize the positive impacts of climate change. The C&D; recycling industry should be of any discussion on renewable energy clean energy initiatives and policies. Many states have imposed mandates for renewable energy generation, yet others do not have such mandates. The C&D; recycling industry should be part of any discussion on renewable energy clean energy initiatives, as it is a huge source of renewable energy generation. When Lance Dickson has a foundation that promotes renewable energy as a clean energy solution, he promotes the C&D; recycling industry and, as a result, the C&D; association should be part of the discussion. In our current mixed economy, the C&D; recycling industry needs to be part of the discussion on renewable energy clean energy initiatives. As a result of this, the C&D; association needs to be part of the discussion on renewable energy clean energy initiatives.
