Contents of this Month's Update

The obvious answer is by working together toward common goals, mixing tried and true methods with cutting-edge thinking, keeping our collective minds open for new ideas, and always being aware of the threats that we face. We cannot just address the latest or most visible problem, and we cannot just respond to threats that are now known. We must continue to plan for threats that fade from view, so that we are ready to address them when they reemerge. This is why it is so important to have a well-funded, well-organized, and well-supported research enterprise that is dedicated to finding solutions to the most pressing challenges of our time.

Virtual Hearing - Ending Exploitation: A Microcosm of the DHS Centers of Excellence Program

The two-year $400,000 grant from the CINA Department of the U.S. Department of Homeland Security will enable Professor of Computer Science and Director, Center for Information and National Security Assurance (CINA) at George Mason University, Maurice Kugler, to work with a team of researchers to apply tools from economics, cryptography, and computer science to address the problem of human trafficking. The project will include the development of a suite of cutting-edge tools for analyzing Bitcoin and other cryptocurrencies, as well as for investigating the flow of dirty money from transaction to seizure.

Congratulations to CINA scholar, Tasheonna Walton who was recently selected for a highly anticipated internship with the U.S. Department of Homeland Security.

George Mason University Collaborative Education Board Meeting for 20th Century Crises
