IN THE NEWS

Mason research influences courtroom setup during COVID-19

February 2021
The Mason research study was recently published in the American Journal of Forensic Medicine and Pathology. Researchers believe the setup allows for more social distancing and that the courtrooms are making changes to their spaces.

MASS study finds that defendants and lawyers can speak confidentially while maintaining safe distance.

February 2021
The study is a collaboration between Mason researchers and the Virginia Court System.

Lockdowns did not lead to increased violent crime in local communities, the study showed.

February 2021
The study found that despite lockdowns due to COVID-19, the violent crime rate in the United States was similar to its pre-pandemic levels.

The university still needs volunteers to help at the Patriot Procession.

A New York Times article describes how several shifts are available throughout the week.

April 28, 2021
A New York Times article describes how several shifts are available throughout the week.

Some say last week's trial of former Minneapolis police officer Derek Chauvin brings us closer to justice, and horrible death is frustration at multiple levels: You don't lean with your knee on a handcuffed person's neck for more than nine minutes no matter who you are, who the person laying on the ground is, where you are, or whatever the circumstances may be; no matter what; period. I am comforted by the future will bring us more justice, peace, and freedom.

Violence. It is beyond individual officers. At this point, this is a systemic issue.

I am comforted by the future will bring us more justice, peace, and freedom.
