What's next?

In a recent article in The Hill, Okechukwu noted that the George Floyd case is a milestone, concluding with a jury verdict of guilty on all three murder charges. As I watched the news come out, I felt a mix of sadness, relief, and justice being served. My sense about George Floyd's tragic death is that the fact that the jury deliberated quickly and rendered an unequivocal verdict. It is a bit of hope that the American justice system might be slowly, but surely, moving towards a better place for our society.

Michael B. Jordan, President and Chair of the Board of the George Floyd Memorial Foundation, recently voiced his support, saying, "I am comforted by the fact that the jury deliberated quickly and rendered an unequivocal verdict. It is a bit of hope that the American justice system might be slowly, but surely, moving towards a better place for our society."

The university still needs volunteers to help at the Patriot Procession. More information can be found here.

Rainald Löhner’s article, "Vocalization and Vocalizations: A Window on the Human Mind," published in the journal *Cognition*, explores the relationship between vocalizations and cognitive processes. Löhner, a professor in the Department of Psychology, notes that vocalizations are often used to express emotions and can be an important tool for understanding human cognition.

**MASON SCIENCE COMMUNITY**

Lance Liotta, co-founder of Ceres Nanosciences, presented his company’s innovative diagnostic testing technology for viruses like SARS-CoV-2, influenza, and more. On Thursday, March 18, Mason hosted a virtual presentation of research in action, highlighting the latest innovations in science and technology.

 inflatable particles, which improve diagnostic testing for viruses like SARS-CoV-2, influenza, and more. On Thursday, March 18, Mason hosted a virtual presentation of research in action, highlighting the latest innovations in science and technology.
