What's next?

May 5, 2021

Activities that took place over the past month have left the Mason community wondering about its next steps. Mason has been faced with a number of decisions over the past year, from closing the university’s physical buildings to remote learning, from the development and implementation of a mask mandate to vaccinations and testing, and from remote and virtual events to in-person gatherings. The actions taken to navigate these challenges have been widely credited with keeping the Mason community safe and healthy, but the question of what the next steps should be continues to be debated.

In an April 22 letter to the Mason community, President Ángel Cabrera outlined the university’s efforts to make a safe return to campus possible for the fall semester. The letter summarized actions currently being taken to ensure the safety of staff, students, and faculty, and Cabrera expressed his confidence in the university’s ability to continue to respond to changing conditions and implement effective strategies to keep everyone safe.

Cabrera emphasized the importance of the university’s commitment to its students, faculty, and staff, and the necessity of ensuring that everyone feels safe and secure. He assured the Mason community that the university’s efforts will continue to be focused on providing a safe and healthy environment for all.

Cabrera concluded his letter by thanking everyone for their dedication and hard work, and by expressing his hope that the university can continue to provide a safe and healthy environment for everyone.

Jeff Theobald highlights the work of Scott Glaberman

Mason Science researcher Jeff Theobald recently highlighted the work of Scott Glaberman, a professor in the Department of Physics and Astronomy, and his team’s research on Martian environmental impact. Theobald mentioned Glaberman’s work on the potential environmental impact of future human missions to Mars, and how his team’s research could help inform future missions. Theobald expressed his admiration for Glaberman’s dedication to his work, and how his research could help inform future missions to Mars.
