The European Union Horizon 2020 NGI_Trust project of which Kantara is a consortium partner has released the second open call. This is a great funding opportunity for Internet innovators, researchers, developers, SMEs, that are working in the field of privacy and trust enhancing technologies.

**The Key Priority Topics for the open call are the following:**

- Better management of consent: to give more control to the end-user of their data when accessing and using services.
- Technical innovation in privacy enhancing technologies, such as cryptography, federated identity, security and privacy to protect users and data at rest.
- The application of artificial intelligence techniques to identify networks to serve the user’s interests.
- Enabling and fostering trust among networks to maintain a trustable Internet infrastructure.

Please bear in mind that the NGI_Trust consortium expects that proposals submitted to the open call will, to some extent, overlap with the consortium partners’ ongoing projects. The proposals should not just develop a privacy-friendly technology, but also a convincing concept on how to drive uptake. You should consider the potential socio-economic impact of what they propose to develop (e.g. if uptake is expected at the European level to support a specific sector or area) and how you would promote and make use of the expected use cases.

**Deadline to submit proposals:** 1 December 2019

**For full call text, guidance for applicants, eligibility criteria, funding model, proposal template, etc. visit below:**
