The ISE Newsletter provides up-to-date information on conferences, funding opportunities, and challenges in the fields of sustainable development, economic growth, and environmental stewardship. The biweekly newsletter aims to facilitate information sharing among researchers, practitioners, and relevant local, national, and international organizations. The newsletter focuses on topics such as climate change, energy, oceans, food security, and sustainable business practices.

In light of the global health crisis, the COVID-19 pandemic, and the urgent need for urgent action to address the impacts of climate change, the newsletter highlights initiatives and solutions that can help mitigate the impacts of these crises. It features profiles of individuals who have been leading the charge in their respective fields, including Jeffrey Sachs (SDSN), Adenike Akinsemolu (Green Institute), and Hamad Bin Khalifa Al Thani (Emirates Foundation).

The COVID-19 and climate crises push us to ask: how do we chart a path forward for a more sustainable and equitable future? The newsletter provides insights and perspectives from experts across a range of disciplines, including economics, environmental science, and public health.

The newsletter also features information on the Global Innovation Fund, which supports projects that can produce significant benefits to communities and have the potential for lasting impact beyond the period of the funding. Recipients of the fund are expected to receive a full award, with a budget of up to $1,000,000 for up to 12 months to execute and evaluate their research-centered projects.

In the second stage (Stage 2) of the Global Innovation Fund, awardees will receive a budget of up to $50,000 for four months to undertake pre-development activities. Only awardees of Stage 1 will be eligible to submit a developed full proposal for Stage 2.

The newsletter also highlights the success of the Connected Communities (S&CC) domain designed to build a more cohesive research-to-practice pipeline and foster a collaborative spirit. CIVIC will fund projects that can produce significant benefits to communities and have the potential for lasting impact beyond the period of the funding.

The newsletter features a directory of ISE faculty, including Professor Robert Axtell, Computational Social Science Ph.D. Program, Department of Economics, George Mason University. Professor Axtell has been invited to discuss the Asian experiences with Dr. Zhang Wenhong, Dr. David Ho, along with other experts in the field of infectious disease transmission research.

Infectious Disease Transmission in Rural Areas:

A webinar was held to discuss the challenges and opportunities of infectious disease transmission in rural areas, and epidemiological modeling of COVID-19 outbreaks. This approach is proven to be robust and flexible and can get accurate forecast results. Professor Axtell has published several medical papers with his medical colleagues. He has been invited to discuss the Asian experiences with Dr. Zhang Wenhong, Dr. David Ho, along with other experts in the field of infectious disease transmission research.

Quantitative Finance Perspective:

Professor Axtell has also been invited to discuss the approaches to forecast COVID-19 outbreaks. This approach is proven to be robust and flexible and can get accurate forecast results. Professor Axtell has published several medical papers with his medical colleagues. He has been invited to discuss the Asian experiences with Dr. Zhang Wenhong, Dr. David Ho, along with other experts in the field of infectious disease transmission research.
