Data Science Analytics program launched

Clemson University has announced the launch of the Data Science Analytics program, which is designed to prepare students for careers in data science and analytics.

The program will offer a Bachelor of Science degree in Data Science Analytics, with concentrations in Business Analytics, Data Science, and Applied Data Science. Students will have the opportunity to specialize in areas such as data mining, predictive analytics, statistical analysis, and machine learning.

The program is supported by a $2.5 million grant from the National Science Foundation (NSF), which will provide funding for scholarships, research opportunities, and other resources to support student success.

The Data Science Analytics program is housed within the College of Science at Clemson and is led by Professor Vincent Richards, who is also the director of the university’s Institute for Data Analytics.

Clemson University President James P. Clements said, “Data science is one of the fastest-growing fields in the world, and it is critical for our students and our nation to have a strong foundation in this area.”

The program will be open to students starting in the fall of 2022, and applications will be accepted starting in January.
