The Future Earth US Global Hub is pleased to announce available funding for researchers and organisations to undertake collaborative research on the theme of "Integrated Approaches to Human Migration and Mobility in an Era of Rapid Global Change." This DCL neither constitutes a new competition nor a new program. Rather, interested researchers, organisations, and consortia are invited to submit proposals for a project that addresses at least two of three areas of migration and mobility research: (1) the social, economic, and environmental implications of migration and mobility, (2) the development and implementation of policy and practice to support the integration of migrants and mobility, and (3) the development and implementation of data-driven approaches to monitor and evaluate migration and mobility.

Proposal requirements:
- Proposals must be submitted online through the Belmont Forum grant portal.
- Proposals are due by 29 July 2022 by 20:00 UTC.
- Each proposing team should have a minimum of three participants.
- The project duration should be up to three years.
- The estimated total program funding is $5,000,000.
- The call is open to researchers and organisations from all eligible countries, but they must have a legal entity located in the United States.
- Proposals must align with the Belmont Forum's priorities and be consistent with the principles of transdisciplinarity, data sharing, and open access.

For more information about proposal requirements and how to submit a proposal, please visit the Future Earth US Global Hub website or contact the programme manager directly.
