Clemson researchers receive seed grant from Prisma Health

Our Resilient Clemson Family

To our alumni and friends, we hope that you and yours are well and safe. Thank you for your support of the students, faculty, and staff of the College of Science during this challenging time. Despite the difficulties brought on by the coronavirus pandemic, the college is reaching new heights with the work of our students, faculty, and staff.

The lives of so many students have been upended, and we are amazed at their positivity and adaptability as they finish their semester in the best manner possible. If you know any of our students who are serving communities as health professionals and in other essential roles, please let them know about all of the pride and support we do have for you.

For graduating seniors who will finish their undergraduate careers in this way, I hope you emphasize the value of resilience and reflect on the adaptability you have developed and will take with you into your new endeavors. The coronavirus pandemic has underscored the importance of resilience in so many areas of life, including higher education. As we live through this historic moment, we are reminded of the strength and resilience that we have at Clemson.

I want to recognize the support from alumni and friends of the College of Science. As you know, the college had to make quick and significant changes to our operations, including the preservation of our most important research assets (cell lines, animal colonies, sensitive compounds and essential equipment). I am indebted to our leadership team and staff who were in the lab 24/7 to make sure that our operations were not adversely impacted. I am also grateful to our administration, the Tigers Athletic Board, and our research partners who were instrumental in our ability to continue high-quality research.

To our alumni and friends, we hope that you and yours are well and safe. Thank you for your support of the students, faculty, and staff of the College of Science during this challenging time.
