Mason Science in the News

Message from the Dean

Dean Fernando Miralles-Wilhelm

I am pleased to announce that this year, we will be recognizing the achievements of the Mason Science class of 2021. We all know the old phrase "April showers bring May flowers." And so it is with great pleasure that we look forward to celebrating the accomplishments of our students.

Mason Students Accepted into the Emerging Contaminant Conference

Saleet Jafri and Liping Di, both Mason students, have been accepted into the Emerging Contaminant conference. The conference will be held in Virginia from April 22nd to April 24th. Saleet Jafri and Liping Di will present their research on the presence of pharmaceutical and personal care products in water. Their research focuses on water analysis in the Potomac River for PFAS in water. Saleet is currently pursuing his PhD under the guidance of Dr. Anthony Falsetti, and Liping is a doctoral student and researcher in the Foster Research Lab. Their research is part of the latest in emerging contaminant research, policies, and outreach in the soil, water, and air.

Mid-Atlantic Postdoc Mentoring Conference

Brown Fellow, Anthony Falsetti, has been accepted into the Mid-Atlantic Postdoc Mentoring Conference. The conference is a unique opportunity for postdocs to network and share their research with other postdocs in the region.

Mason Science in the News

A new tool developed by Mason researchers will be presented at the COS Alumni Chapter April Meeting on April 22nd at 7:30pm. The tool, developed by Mason researchers, will be used to increase the number of medical examiners and coroners. The tool identifies a method to successfully predict the specific location of a crime scene.

Funding for graduate student support and research initiatives within the College of Science. Graduate students are often reliant on scholarships, loans to continue their education and afford the cost of living in the Northern Virginia area. Mason Science graduate students at Mason, they often rely on scholarships, loans to continue their education and afford the cost of living in the Northern Virginia area. In this issue of our Alumni & Friends Newsletter, we will be highlighting the stories of graduate students at Mason who are advancing the field of science.
