Dear Members of the UO Research Community,

As you know, UO received 25 new awards totaling more than $2.8 million during the month of April 2018. Faculty and staff at the University of Oregon received these awards for their research activities across a variety of fields, including the arts, education, engineering, environmental science, and more.

Research at the university is fundamental to the mission of Oregon and is essential to Oregon's economic and civic vitality. The office is committed to enhancing these efforts by providing federal and internal controls to support research and graduate education.

I hope you will join me in congratulating our own Judith Eisen on her recent election into the American Academy of Arts and Sciences. Cleveland's attendance was sponsored by the CASE program, which is funded by AAU institutions that supports academic inventions and the societal impact of university research.

Innovation Partnership Services (IPS) continues to support the Undergraduate Student Advocates for Research Funding (SPUR) by providing funding to the Oregon Student Association (OSA) to support the educational and professional development of Oregon State University (OSU) students. The OSA is committed to providing support to students and helping them achieve their full potential.

During the month of April 2018, a workshop was held for creating an inclusive and supportive research environment. The Office of Research and Innovation is committed to providing support to students and helping them achieve their full potential.

We aim to share the stories of students and faculty who work to solve a wide range of important problems. If you have any stories or ideas you would like to share, please reach out to us.

Best regards,
