Deanne is the new Associate Director of Research Development Services (RDS), a role that has been evolving at the University of Oregon (UO). The office supports nearly 2,000 researchers each year with their large-scale funding matters. It’s more impactful when you can tell a story about why I’ve benefited and why other researchers have benefited from our programs and services. Deanne joined the university in 2015 and has worked as a research manager and assistant director for RDS, overseeing RDS’s operations with a focus on its administrative and financial support for sponsored programs, including identification of funding opportunities, proposal submission, research compliance, and contracts and grant administration. The office is committed to enhancing these efforts by providing administrative and financial support for sponsored programs, including identification of funding opportunities, proposal submission, research compliance, and contracts and grant administration. The office is committed to enhancing these efforts by providing administrative and financial support for sponsored programs, including identification of funding opportunities, proposal submission, research compliance, and contracts and grant administration.

Dear Members of the UO Research Community,

The Annual Grants Competition (AGC) for the Undergraduate Research Opportunity Program (UROP) is now open. UROP is a research program for UO undergraduates, and we are very grateful to all the faculty and staff who support this program through mentoring and other resources. The AGC is a chance for students to develop new skills, gain research experience, and work with professional researchers on a cutting-edge research project. It’s important for the university to have money to give to students to do their research, Cleveland added.

Undergraduate Student Advocates for Research Funding

Oregon National Academy of Inventors (NAI) gets official chapter

The National Academy of Inventors (NAI) has been named the official chapter at the University of Oregon — the state’s only Association of American Universities member. Research, development and innovation are critical drivers of the UO’s mission of discovery and public service, said David Conover, vice president for research and innovation.

Dear Members of the UO Research Community,

We are excited to announce that the Undergraduate Student Advocates for Research Funding (USARF) has been awarded a national grant by the National Academy of Inventors (NAI) for the 2018 Undergraduate Research Symposium (URS). This is a significant milestone for USARF and the UO, as it demonstrates the importance of student-driven research and the impact that student advocates can have on the research community.
