THOUGHTS FROM THE DIRECTOR

My role at the CINA center puts me in contact with a wide variety of people at GMU and throughout the community. From what I see, there is a real and compelling need for training and education in the area of cybersecurity. Our Center of Excellence (CoE) in Engineering Secure Environments is a proud part of this effort.

On November 16, the GMU-TV of George Mason University, in cooperation with the Office of Homeland Security, will host the CINA Distinguished Speaker Series with Dr. Louise Shelley. She is the Omer L. Shattuck Professor of Criminology and Criminal Justice and the Director of the Center for Criminal Investigations and Network Analysis (CINA) in the College of Humanities and Social Sciences at George Mason University.

Dr. Shelley will describe ways that advanced data analytics are being used to fight transnational crime. She will also describe her National Science Foundation funded team’s uses of data to provide key insights into critical problems of corruption, terrorism, illicit trade, and human rights. The event will be live streamed through GMU-TV and will be available for viewing on the GMU-TV digital archive.

In her presentation, Dr. Shelley will discuss the following topics:

- Researching and developing science and technology solutions to combat emerging threats.
- The challenge of dealing with the flood of data that is the current world.
- The need for knowledgeable and experienced analysts who can tie together the multiple threads generated by the tools.
- The value of knowledge sharing among the CoE and research communities.
- The role of CoE Directors in facilitating these interactions.

This event is co-sponsored by the CINA Center of Excellence (CoE) and research communities. These interactions are priceless - I learn from every one, and I always leave the interactions with renewed respect, deeper understanding, and ideas.
