THOUGHTS FROM THE DIRECTOR

My role at the CINA center puts me in contact with a wide variety of people at GMU and the greater public beyond. I'm constantly learning, making connections, and delivering presentations worldwide. I've had the pleasure of working with a diverse range of individuals who share my passion for criminal investigations and network analysis. These discussions have been invaluable in advancing our understanding of the complex issues related to criminal networks. NEWS

DHS Series Call for Engineering Secure Environments

The Department of Homeland Security's Science and Technology Directorate (Humberto Hernandez, Acting Director) issued a new call for proposals for the Engineering Secure Environments Directorate (ESE). The call will support work in other research and development initiatives and continue the mission of the Center of Excellence for Engineering Secure Environments (CINA). The full call will be available on the CINA website. Interested collaborators should contact Humberto Hernandez for more details.

The Mason Vision Series will be live streamed through GMU-TV and recorded in the digital archive. To RSVP for an upcoming talk, please visit the CINA website. The event was attended by over 100 attendees and featured Dr. Louise Shelley, a professor of criminology and criminal justice and executive director of the Center for the Study of Transnational Crime. She discussed her research on the role of organized crime in the global economy and highlighted the need for a more comprehensive understanding of the issue.

DHS forms CoE for Engineering Secure Environments

The Department of Homeland Security's Science and Technology Directorate (S&T) has launched the Center of Excellence for Engineering Secure Environments (ESE). The center will be led by a new team of experts and will focus on developing advanced technologies to protect critical infrastructure from cyber and physical threats.

The center will be located at the George Mason University's Fairfax campus and will be supported by a $3.6 million grant awarded to ESE. The grant will fund the center's operations for the first year and will support the development of new technologies and tools to protect critical infrastructure.

In her presentation, Dr. Shelley will describe ways that advanced data analytics and machine learning can be used to combat emerging threats. She will also highlight the importance of public-private partnerships in developing advanced technologies to protect critical infrastructure.

Criminals are using sophisticated data analytics and machine learning to uncover the indicators of high-density crime areas. In case you missed it, watch "Open Source Data and Predictive Modeling for High-Density Crime Areas" with Marie Tillyer, a professor of criminology and criminal justice at the University of Texas at San Antonio, discuss open source data and predictive modeling to uncover the indicators of high-density crime areas.

The film also offers perspectives on how to make science more diverse, equitable, and open to all. The documentary powerfully chronicles the groundswell of researchers who are writing a new chapter for women scientists. The film features interviews with leading scientists and researchers, including Dr. Louise Shelley, a professor of criminology and criminal justice and executive director of the Center for the Study of Transnational Crime. The film explores the challenges faced by women scientists and highlights the importance of diversity and inclusion in the scientific community.
