3 Ways To Help Speed Up Your Home's Wi-Fi

SITES OF THE MONTH

Hartelco offers lightning-fast internet speeds, but if your Wi-Fi router is out of date or not set up correctly, it could be slowing you down. Here are some tips to help you maximize router performance:

- 1. Move your router to its ideal position.** Keep your router centrally located in your home and away from thick walls made of brick or concrete, water, and windows.
- 2. Make sure your router is secure.**

Putting a password on your router or limiting which devices can access your network will keep other people from using your network and slowing it down.

- 3. Upgrade your router.** If your household has several people in it — each with a computer, phone, and tablet — plus additional devices such as a gaming console and smart home

equipment, your entry-level router's capacity might be exceeded. A home network with this much online activity warrants the purchase of an upgraded router. We have routers in stock!

If you'd like assistance with setting up and maintaining your home's Wi-Fi, call 402-254-3901 and ask the experts!
