Greetings from Clemson! We hope you are enjoying a prosperous new year.

Vincent Richards, associate professor of Biological Sciences, uses microbial genomics to further our understanding of microbial communities. Richards' research has the potential to support the development of novel therapeutics and prevention strategies.

Our faculty, staff and students are set on thriving in spite of a pandemic and in response to changes across the University. We can and will continue to succeed because of determination, and we are so proud of all our Tigers.

Note from the Chair

Herbertian renovation provides new home for global collection of plant specimens

Faculty receive NSF, DoD, NIH, and NOAA funding for research

Vincent Richards named Clemson University’s 2020 Junior Researcher of the Year

Undergraduates win national scholarships!
