William J. Perry Center for Hemispheric Defense Studies, The

February - The team is collecting and analyzing court cases, assessing federal law enforcement needs, and collaborating with the Federal Law Enforcement Training Centers (FLETC) to survey the impact of COVID-19 on the economy, security and transnational organized crime in the

February 2021, two FBI agents were shot and killed trying to collect precisely the type of data that I would have been working on if I was still employed by the agency. It is sobering to realize that the work I do is potentially life-saving for our law enforcement partners.

The importance of incident response and digital forensics work is often underestimated by the general public. The dangers faced by the men and women working on the front lines of law enforcement are rarely discussed. This is especially true when it comes to the challenges around data collection and access. But our administrative challenges pale in comparison to the dangers faced by the men and women working on the front lines. After this realization, I spent most of my time in the analysis phase. I spent limited time doing field operations, but now I have a much greater appreciation for the work that law enforcement agencies do in the dark corners of the internet.

This work has a natural flow from data collection, to analysis, to outcomes and associated decision making. Most of my professional career was spent doing incident response and digital forensics work. This is a fast-paced environment, often with tight deadlines and high stakes.

New products and tools to assist operational decision-makers are always of interest.  Learn how to become part of the applicant matching process to connect your subject matter experts in order to shed light on this understudied problem. To learn more about this work, contact Dr. bouncing in my inbox.

Watch the video below to learn more about this work, featuring keynotes and panels from our recent 2021 COE Summit.

Hear keynotes & panels complemented by attendee selected sessions from two tracks: Homeland Security and Innovative Technologies.
