While data on this clandestine activity has previously been scarce, there is mounting interest in understanding the scope and scale of cybercrime and how it impacts our economy and national security. In this episode of Mason’s Digital Archive, Dr. Linda Sweeney, a forensic anthropologist, and Dr. Mark Sweeney, a senior research scientist, share insights into the forensic science of human remains. In their presentation, they address questions about how forensic scientists work to identify victims, recover lost evidence, and assist in criminal investigations. They also discuss the challenges faced by forensic anthropologists and the importance of their work in solving crimes and bringing justice to victims. By highlighting the critical role of forensic science in crime solving and the need for continued research and education in this field, their presentation underscores the importance of investing in the next generation of forensic scientists. 

Join us for this compelling conversation and gain a deeper understanding of the critical work being done by forensic scientists today. You can view the presentation on our website or tune in to our digital archive for a comprehensive view of the latest research and insights in this field.
