The Office of the Provost will once again host the Mason Vision Series which sheds light on the real-world applications and impact of scientific research. The series features talks from experts across various fields, aiming to engage and inform a broad audience.

**Virginia Bio** is accepting applications for the STEM2VA: Virginia Statewide Life Science Internship Program. The deadline for applications is January 31, 2022.

An editorial meeting is scheduled for January 13, 2022, from 10:30 to 22:30 a.m. via Zoom. All digital communicators are invited to attend and review the year's editorial calendar, Google Analytics, and updates regarding the department website and social media campaigns. An email will be sent with meeting access information.

Mason chemistry students enhanced their research skills by participating in the University of North Carolina at Chapel Hill's Molecular Medicine (CAPMM) program. Emanuel Petricoin, a professor in the College of Science, conducted protein pathway activation mapping of tissue cells treated with molecular inhibitors. His work was supported by $31,780 in funding from the University of North Carolina at Chapel Hill.
