Symposium at Mason

The Mason Science community is excited to invite you to our annual Symposium. This year’s theme is “Resilience and Hope in the Face of Adversity.” The event will feature keynote speakers, panel discussions, and a student poster session. Details will be announced closer to the event date.

East Coast Optimization Meeting 2021

The East Coast Optimization Meeting 2021 is a unique opportunity for researchers, practitioners, and industry leaders to explore the latest trends and innovations in optimization. The meeting will take place on April 8th from 3 to 4 p.m., and will be held virtually. For more information, please visit the event page.

Funding Call for proposals: IDIA Seed

The Institute for Digital Innovation (IDIA) at George Mason University is seeking proposals for seed funding. The program aims to support innovative ideas and projects that have the potential to transform the digital landscape. The deadline for applications is April 30th.

She Scientists: Health and Science Industry Week

This week-long event aims to connect female students with professionals in the sciences. It includes workshops, panel discussions, and networking opportunities. The event will take place from April 8th to 15th.

Resistance and Resilience: Student Activism and Well-being

A special webinar series focusing on student activism and well-being will be held on April 8th from 2 to 3 p.m. The series will explore strategies for promoting mental health and social justice in the current political climate.

Springtime at Mason

Spring is in the air, and Mason’s campus is blooming with beauty. The cherry blossoms are in full bloom, and the sun is shining bright. It’s a perfect time to enjoy a stroll around campus and appreciate the beauty of nature.

Message from the Dean

Dean Fredric Kirschenbaum reflects on the challenges and successes of the past year and looks forward to a bright future for Mason. He highlights the university’s commitment to innovation and excellence in education.

Research & Discovery

George Mason University scientists have made significant contributions to the field of environmental science. Their research includes the development of artificial intelligence for predicting weather patterns and the study of microbial communities in ecosystems.
