to facilitate information sharing among researchers, practitioners, and relevant local, national, businesses and organizations—so that, together, we can more effectively address the world's sustainable development.

The 8th World Sustainability Forum will shine a light on how we can meet the challenges and opportunities of our time, such as the effects of climate change on nature and people. It will address the long-term consequences of ongoing debt, including solidifying the team, maturing the project plans, and preparing to submit a well-thought-out application no later than October 21, 2020.

This global virtual conference turns to world history to tell the story of global humanity and the structures of countries and to the risks they face, of which Covid-19 is a major illustration. It will also address the long-term consequences of ongoing debt, including solidifying the team, maturing the project plans, and preparing to submit a well-thought-out application no later than October 21, 2020.

This conference will also explore the concepts of sustainability and what we can do to make the world a better place. It will build on the Global Innovation Fund and provide a platform for the development of innovative solutions to address pressing global challenges.

Projects must align with one of three areas:

1. Sustainable Development and the Environment:
   - Research that enables the development of technologies for mitigation, remediation, and/or remediation of environmental pollution to protect human and the environment.
   - Low-fidelity, stochastic modeling to assess COVID-19 mitigation policies.

2. Health and Wellness:
   - Research on the effectiveness of vaccines and treatments for COVID-19 and other diseases.
   - Development of new technologies for the production of healthcare products.

3. Economic Development:
   - Development of innovative solutions for the promotion of small businesses.
   - Research on the impact of the pandemic on the economy and strategies for recovery.

This conference aims to connect members of the Mason community and beyond, providing a platform for the exchange of ideas and the development of new partnerships. It will also offer valuable networking opportunities for researchers and practitioners from around the world.

Our team has organized a detailed database of funding opportunities for various sectors, including sustainable development, health and wellness, and economic development. Applicants may request $5,000 to $100,000 for projects that create and deploy AI tools to improve the way they monitor, model, understand, and ultimately manage Earth's natural resources for a more sustainable future.

The Office of Science of the US Department of Energy, NOAA Fisheries, and Catholic University of America & NASA are among the organizations sponsoring this conference. The conference is open to funding innovations in these and other fields, including partnerships with organizations such as the National Geographic Society, JCOIN Coordination and Translation Center, and the University of Virginia System.

By attending this conference, you will have the opportunity to network with experts in your field and learn about the latest trends and developments in sustainability. Whether you are a researcher, practitioner, or simply interested in learning more about sustainability, this conference is for you.

Join us on Tuesday, June 23, 2020, for the official launch of the Institute for Digital Innovation (IDIA) with a virtual event. This event will feature presentations from experts in their respective fields, including Jie Zhang from the College of Science, Daniel Tong from the College of Science, and Leigh McCue-Weil from the Volgenau School of Engineering.

The event will be held at 12-1:30pm and will include opportunities to ask questions and learn more about the Institute for Digital Innovation. Don't miss this opportunity to connect with others and learn about the latest developments in the field of sustainability.
