Headwaters Center goes off the grid with ANP Lighting!

The Headwaters Center is a non-profit hub located in Winter Park, Colorado for mountain entertainment events. This “off the grid” facility derives the majority of its energy from the sun, stored in and used from batteries onsite.

Architectural creativity for the project was provided by Peter Van Dusen Project Design + Management.

Solar power generates direct current to the battery storage system to power lighting, HVAC systems, security, audio and video systems. The system is DC, end to end, never converting to AC. ANP Lighting provided all fixtures with 24v DC input drivers to accept power from the facilities centralized system.

Mini Wall mounts illuminate the exterior of the facility, the sidewalks and the parking area.
