Learning all there is to know about budget & finance can feel daunting. The Support Framework: Your Guide to Finding Help

Don't Use Special Characters in Requisitions

When shopping in Oracle Procurement, it is best to not use special characters including periods, underscores, plus signs, semicolons, and commas. This can result in the system not being able to properly parse the requisition, causing issues with the requisition process. It is recommended to use only letters and numbers when creating requisitions to ensure smooth processing.

UCSD Expenditure Categories

Using these Oracle categories is important for accurate financial tracking. They help ensure that expenditures are properly categorized and reported. This allows for better financial analysis and decision-making. Non-compliance with these categories can lead to confusion and errors in financial reporting.

Additional Information:

For sponsored projects, the PPM Budget Resources report will display any PPM Budgets with resource categories that do not match the project's sponsored and general project budgets needing correction. This can impact the view of other reports. Use the Incorrect PPM Budget Resources report to identify both sponsored and non-sponsored project expenditures that do not match the project's budget.

Business Analytics Hub

This hub provides access to a variety of dashboards and reports that are useful for budget and finance professionals. The dashboards provide real-time data on different aspects of the institution's financial health. Reports include budget variances, financial forecasts, and other key financial metrics. This can help identify trends and areas for improvement.

Video: Office Depot Name Change: ODP Business Solutions LLC

Depot punchout will be updated to reflect the name change shortly after launch. The update will be made to ensure proper integration with Oracle Procurement. It is important to note that the update will not affect the functionality of the punchout.
