Hope your 2019 is off to a fantastic start!

As I basked in the Clemson spirit in Santa Clara witnessing our Clemson Tigers win the national championship, I heard Coach Swinney say in his interview, "We were not chasing the national championship, we were focused on being the best we could be every day." Chasing excellence yielded perfection for Clemson Football this year.

As we relentlessly pursue excellence in science, we may not have national championships, but we will have a tremendous positive impact on future Clemsonians' greatest scientific challenges and opportunities for generations to come.

Thank you for being such a big part of the education, research and experience that happens every day at Clemson. Take pride in knowing your giving has helped students and faculty answer society's most important questions.

As we look back at 2018 -- What a Year! -- I am reminded of that image of Coach Swinney and our student athletes locked arm-in-arm as they took the field. Join us academically, arm-in-arm, as we collectively focus on advancing SCIENCE.

Go Tigers!

Perfect in every way

The Tigers are in their second national championship in three years, and the Clemson Tigers became the first team in the modern era to go 15-0, anointing the 2018-2019 squad as the "greatest college football team of all time." The Tigers crushed the vaunted Alabama Crimson Tide 44-16 on Jan. 7 in Santa Clara, California. True-freshman quarterback Trevor Lawrence led the charge, playing with a calm and maturity well beyond his years. The following Saturday, tens of thousands attended a championship parade and celebration in downtown Clemson and at the stadium. The College of Science joins the Clemson University family in congratulating coach Dabo Swinney and his ultra-talented team of coaches and players. Up next: three out of four?

As today’s student leaders, Clemson's ODK members are forging the future in a variety of ways

The Clemson Circle of Omicron Delta Kappa (ODK), which includes 30 members from the College of Science, sells and distributes about 2,000 honor stoles each academic year. The profits benefit the campus and external organizations in extraordinary ways.

Clemson researchers work with citizen-scientists to better understand diversity of rattlesnake venom

Clemson researchers work with citizen-scientists to better understand diversity of rattlesnake venom.

As today’s student leaders, Clemson’s ODK members are forging the future in a variety of ways.

The Mojave rattlesnakes that live in the deserts of the southwestern U.S. and central Mexico are packed with lethal venom, though they rarely strike unless provoked.

Clemson researchers work with citizen-scientists to better understand diversity of rattlesnake venom.

The discovery that Mojave Rattlesnakes have multiple venom types that are more widespread than previously believed required a large research collaboration between principal investigators, students and almost 100 citizen-scientists in five laboratories across the United States and Mexico. The research was published in Scientific Reports.
