United States” in the Journal of Environmental Horticulture (https://meridian.allenpress.com/jeh). The topic of using professional peers such as our “Versatile Native Grasses and a Turf-Alternative Groundcover for the Arid Southwest valuable for participants because they receive up-to-date practical research results that they can readily adopt for

mode in December. Participating attendees earned continuing education units to enable renewal of their Arizona Association delivered the annual Pest Management and Pesticide Safety Seminar in a hybrid in-person and virtual environment. There was a lot of excitement at the seminar, as participants were eager to learn about the latest pest management techniques and strategies. Attendees were engaged in discussions and learning activities, and there were opportunities for hands-on demonstrations and practical exercises. The seminar focused on a wide range of topics, including pest identification, control methods, and the latest research in pest management. A highlight of the seminar was the interactive sessions, where participants worked in small groups to solve pest management challenges. The seminar was well-received, with attendees reporting that they gained valuable insights and practical knowledge that they could apply in their work. Attendees were also enthusiastic about the opportunity to network with other professionals in the field, and the seminar provided a valuable platform for sharing ideas and best practices. Overall, the seminar was a great success and provided a valuable learning experience for those in attendance.
