intervention using a series of focus groups. Lisa Goldman Rosas, PhD MPH, Faculty Director of the providers to understand their interpretations of the findings and to identify opportunities for perspective of pregnant women with lupus and their providers. Her study design included cutting-of a national federation whereby other states will create similar registries that will provide data to the of melanoma patients in California including family members and friends. The registry will form part of Melanoma Community Registry of California (MCRC). The goal of the registry is to develop a cohort melanoma patients with an emphasis on early detection and treatment. The registry will be accessible to researchers, clinicians, and the public for research purposes.

September 2019. The Peer Navigators were excited to showcase their wonderful work and speak to others about their process during this project. We are immensely appreciative and humbled by the Health Disparities in Racial/Ethnic Minorities and the Medically Underserved that took place in presented at the American Association of Cancer Research Conference on The Science of Cancer research. To date, the Peer Navigators have successfully carried out 10 community engagement events surrounding breast cancer awareness such as mammogram screenings and community breast cancer research. The OCE worked with the Peer Navigators to develop a conference poster that was resources, reaching over 700 women in Alameda County. These community events ranged from a phase of the program included educational sessions on topics such as breast cancer disparities, best practices in community health, and evidence-based approaches to improving health outcomes. The OCE Summer 2019 Valley Fellows are working closely with community partners to ensure that the research is relevant and impactful for local communities. These Fellows are addressing issues relating to health disparities, and hopes to contribute to solutions by pursuing a medical career in the field of community health.

**RESEARCH PROJECTS**

- **Project 1:** Developing Tools to Measure Opportunities to Prevent Congenital Syphilis in Santa Clara County
  - **Community Partner:** Latino Cancer Institute
  - **Principal Investigator:** Navika Shukla

- **Project 2:** Intervention for the Early Identification of Lupus in Women: Understanding preeclampsia and preterm birth
  - **Community Partner:** Santa Clara County Public Health Department
  - **Principal Investigator:** Courtney Pedersen

The OCE is proud to support these two innovative projects that address critical health disparities in our community. The OCE is committed to advancing research that transforms human health and addresses health disparities. The course will provide opportunities for students to explore their research interests and develop their skills in community engagement. The course will be offered in the Winter 2020 semester and is open to all Stanford Medicine students. A limited number of scholarships are available to support student participation in this course. The OCE is also excited to announce the launch of our new website where we will share more information about our upcoming events, research projects, and resources. We look forward to continuing to build strong partnerships and make a difference in the community.
