Focus groups, proposing an analysis plan, and developing the corresponding budget to complete this project. Thank you for your contributions to the African American Breast Cancer Peer Navigator team.

In recent grant applications, she worked with the Department of Epidemiology and Population Health to develop research proposals that evaluate the health effects of lupus, especially during pregnancy. Geeta has a concentration in “Exploring Health Disparities Through a Big Data Lens.” She’s thankful for the opportunity to conduct research as part of the Office of Community Engagement.

Geeta Rajamani is a junior from Saint Paul, Minnesota, who is majoring in psychology with a minor in sociology. Her research experience to date has consisted of conducting surveys and longitudinal data analysis in cooperation with a Stanford neuroscientist and a research affiliate from the United Kingdom. As part of the clinical psychology concentration, she has been involved in studying adolescent mental health and suicide prevention. She aspires to contribute to solutions by pursuing a medical degree and practicing as a clinical psychologist.

Research at Stanford Medicine is transforming human health and addressing health disparities. The course will provide historical context, theoretical frameworks, foundational skills in diverse community engagement research that transforms human health and addresses health disparities. The course will provide students with a solid understanding of community engagement concepts and proposed innovative qualitative methodologies like Ripple Effects Mapping and quantitative methods. Through small group exercises and case studies, students apply these methods to community and address systemic inequities. In response to a recent Robert Wood Johnson Foundation initiative, students will work with their community partners to conduct health disparities research that advances social and racial justice. This course is suitable for students with a variety of backgrounds and career aspirations.
