Sociologist and Sociologist have been working to improve the health outcomes of women with lupus. Through her research, she has identified the impact of lupus on pregnancy outcomes and developed strategies to support women and their providers. Her work has resulted in a better understanding of the needs of pregnant women with lupus and the development of interventions to improve their health outcomes.

Two Stanford Medicine students, Fontanilla, MPA, and her team at SOMOS, have been working on community-based research projects. Fontanilla has been leading the effort to address the needs of the East San Jose community, where she oversees the local implementation of federally funded nutrition education programs. Her team has been working to develop interventions to improve nutrition and health outcomes in this population.

In recent grant applications, she worked with the Office of Community Engagement to incorporate mixed methods approaches to understand the health effects of lupus, especially during pregnancy. This work has led to the development of community-informed interventions to support women with lupus and their providers.

In response to a recent Robert Wood Johnson Foundation-funded grant, the office of community engagement has been working to create opportunities for community partners to engage in community-responsive research or service projects in San Mateo and Santa Clara counties. The office is working to support the implementation of community-based research projects and to facilitate partnerships between the community and academic institutions.

Undergraduate Student Spotlight:

Geeta Rajamani is a junior from Saint Paul, Minnesota, majoring in sociology with a concentration in “Exploring Health Disparities Through a Big Data Lens.” She’s thankful for the opportunity to work with students, faculty, and community partners to build new research and education collaborations. Her work has focused on understanding the impact of health disparities on vulnerable populations and developing interventions to address these issues.

RESEARCH PROJECTS

African American Breast Cancer Peer Navigator Program

The African American Breast Cancer Peer Navigator Program was launched in 2019, with the goal of improving breast cancer awareness and survivorship among African American communities in Alameda County. The program is led by a team of Peer Navigators who are trained to provide support and guidance to women who have been diagnosed with breast cancer.

The program has been successful in increasing breast cancer awareness and providing support to women who have been diagnosed with the disease. The Peer Navigators have been able to connect women with local resources and support groups, and have been able to provide emotional support and guidance as women navigate their treatment and recovery.

Wipe Out Melanoma California

Wipe Out Melanoma (WoM) California is a statewide program dedicated to reducing the incidence and mortality of melanoma in California. The program is run by the California Melanoma Foundation and is supported by the California Department of Public Health.

WoM California has been successful in increasing awareness of melanoma and providing support to individuals who have been diagnosed with the disease. The program has provided education and resources to individuals at risk for melanoma and has been able to provide support to those who have been diagnosed with the disease.

RESEARCH RESOURCES

The office of community engagement has been working to support the implementation of community-based research projects and to facilitate partnerships between the community and academic institutions. The office has been working to support the implementation of community-based research projects and to facilitate partnerships between the community and academic institutions.

UPCOMING EVENTS

FALL 2019 NEWSLETTER

Welcome to the 2019-2020 Academic year! I am excited to begin the year with our newest OCE team member, Wei-ting Chen, PhD, MA. Along with her expertise, and the legacy of success that her predecessors have established, we are looking forward to continuing working with the Peer Navigators.

We are also delighted to announce the launch of our new website, where we hope to provide you with helpful information, resources, and an interactive view of our work. The website includes a range of resources and information about our programs and initiatives, as well as opportunities to get involved and contribute to our work.

Thank you for your contributions to the African American Breast Cancer Peer Navigator Program. We are immensely appreciative and humbled by the opportunity to learn and look forward to continuing working with the Peer Navigators.
