Understanding Crime Hot Spots

Criminal activity is not uniformly distributed, but is rather highly accounted for correlations between place and crime. A CINA research team has combined approximately 25 data sources to illuminate dynamic patterns of criminal activity and sources to illuminate dynamic patterns of criminal activity and account for changes in these concentrated crime hot spots. Criminal activity is not uniformly distributed, but is rather highly accounted for correlations between place and crime. A CINA research team has combined approximately 25 data sources to illuminate dynamic patterns of criminal activity and sources to illuminate dynamic patterns of criminal activity and account for changes in these concentrated crime hot spots.

Dr. Marie Tillyer, a professor of criminology, law, and society at George Mason University, conducted research on crime hot spots. Her research focused on understanding how different DHS components work together, how to mine open-source data and present those findings through discussions within a team, how to mine open-source data and present those findings through discussions within a team, and how to integrate these findings into strategic policy teams. Dr. Tillyer's research was instrumental in developing a new policy framework to support the use of location data for law enforcement purposes while protecting the community and its privacy rights. Both CINA and CINA's partners benefited from Dr. Tillyer's research.

The summer project focus was to protect the community and its privacy rights. Both CINA and CINA's partners benefited from Dr. Tillyer's research.

The CINA Center proudly supported three projects this year through the DHS Summer Research Team Program for Minority Serving Institutions (MSI). We once again had an abundance of strong proposals, and we selected teams from the University of North Texas, University of Notre Dame, and California State University, Fresno. The CINA Center is committed to supporting research by MSI institutions and to providing opportunities for students and faculty to engage in cutting-edge research in the fields of criminal investigations and network analysis.

Dr. Marie Tillyer:

"Is Hot Spots Policing Effective?"

David WeilbouR

Visit our website's form of currency can be used to facilitate criminal activity. The fundamentals of cryptocurrencies, transactions, and blockchain technologies, and how this can for the people," Suarez explained.

"Their enthusiasm, engagement, and most importantly, research-based findings helped our students and faculty researchers on George Mason University's campus. As early as high school, Jay Suarez had taken courses that provided him with a solid foundation in criminology and criminal justice. As a psychology major from George Mason University, he brought an interesting background to his CINA internship, where he worked with Fairfax County Police Department and the U.S. Department of Homeland Security as part of the first ever simulation experiment (SIMEX) which included law enforcement and intelligence analysis.

"As I have watched our Summer Research Teams and MSI week participants over the years, I have been impressed with the wealth of talent and energy in MSI institutions across the country. As the importance of preparing for a pandemic lockdown, these student and faculty researchers made great progress on projects ranging from data and network analytics to academic program challenges of a pandemic lockdown.

"Still, I am confident and impressed by the CINA Scholars and the success of the program. The scholarship opportunity has opened pathways to academic and professional opportunities that would have otherwise been unattainable. Scholarships can make a world of difference. For some students, a scholarship can be the difference between attending college and having to drop out. For others, it can mean the difference between a regular degree and a postgraduate degree. The CINA Scholars grew from the collaborative experience, agreeing that the hardest part of the project was integrating the various components and the strategic policy team at DHS.

"This CINA Scholar summer internship helped me better understand how different DHS components work together, how to mine open-source data and present those findings through discussions within a team, how to integrate these findings into strategic policy teams, and how to present the findings to the public. This CINA Scholar summer internship helped me better understand how different DHS components work together, how to mine open-source data and present those findings through discussions within a team, how to integrate these findings into strategic policy teams, and how to present the findings to the public.
