Notrx! away my shit
I'm Chris Kennedy. I'm a Ph.D. student at Mason in the Department of Economics. As a part of my research, I've been investigating the effects of the COVID-19 pandemic on adolescents in low- and middle-income countries. My recent work has focused on translating the concept of economic uncertainty to research on the pandemic.

In my latest project, I've been exploring how adolescents in these countries have been affected by the pandemic. I've found that there is a significant amount of uncertainty regarding the future economic prospects of these individuals. My research has shown that adolescents in these countries are more likely to experience economic uncertainty due to the pandemic, leading to increased levels of anxiety and depression.

I'm currently working on extending my research to include a larger sample size and additional variables. My goal is to better understand the impact of the pandemic on adolescents' mental health and well-being. I'm excited to continue my research and hope to make a meaningful contribution to the field.
