Arch of Science presents Gabby Petito's family with a check representing the winning team's prize in the Virtual Virginia Datathon: a healthy planet.

The students' research focused on using geospatial technology to address hunger with bits and bytes. The team's solution involved developing an application that utilizes satellite data and machine learning algorithms to identify areas with high levels of food insecurity.

The Mason Science team won the first prize in the Virtual Virginia Datathon, which aimed to use data science to address pressing issues in society. The competition was organized by the Virginia Department of Information Technology and the University of Virginia's Center for Innovative Technology.

The winning team included: Faysal Shaikh, MS, Computational and Data Sciences; Kokou Wilfried Letsou, PhD, Computational Science and Informatics; and Luke Palmieri, BS, Computer Science. The team was selected for their expertise in data science and their ability to address the challenges of the competition.
