Mason science news prior to virtual Virginia datathon

Mason researchers and computer scientists developed a new predictive model based on real-time data from a Dutch hospital and significant demographic factors that could help health care providers more accurately forecast future hospital needs. The research is described in a study published in the journal Computational and Mathematical Methods in Medicine.

IN THE NEWS

President Washington’s investiture remarks

Over the last week, the Mason nation has been celebrating the investiture of our eighth president, Dr. Khosla. President Khosla emphasized Mason’s strength in research, education, and community engagement, while also acknowledging the importance of diversity, equity, and inclusion.

Message from the Dean
