Note from the Chair

Greetings from Biological Sciences at Clemson!

As we approach Give Day, will you join me in giving back to our department to help us achieve our strategic goals.

In the past year, our department has made significant progress towards these goals and particularly to prepare our students for the challenges to come. Our faculty, staff and students have worked hard to inspire and prepare the next generation to solve tomorrow’s biological challenges through innovative teaching, practices during her field research in the Florida Keys.

Dr. Ted Swann, Biological Sciences ’97, has been named chief executive officer and president of PharmaCyt, a company that develops therapeutic antibody technologies. Dr. Swann, who has been involved in numerous biological sciences research projects, has shown how flower colors change in response to fluctuations in temperature and aridity and was interviewed on Science Friday.

Our regional graduate student, Tokea (Kea) Payton in Michael Childress’ lab received the Instructor Advanced course at the Society for Integrative and Comparative Biology national meeting.

Ph.D. student Leah DeLorenzo in Kara Powder’s lab won Best Student Poster presentation in Vertebrate Morphology at the Society for Integrative and Comparative Biology.

Ph.D. student Amanda Palecek McClung in Richard Blob’s lab won the Karel Liem Award for Evolutionary Developmental Biology at the Society for Integrative and Comparative Biology annual meeting.

Ph.D. student Laary Cushman in Vincent Richards’ lab is currently studying the genetics of the highly venomous Tiger Rattlesnake. With the help of his undergraduate mentors, Laary is studying the genetics of the highly venomous Tiger Rattlesnake. With the help of his undergraduate mentors, Laary is studying the genetics of the highly venomous Tiger Rattlesnake.

The Jackson Laboratory in Maine is currently studying the genetics of the highly venomous Tiger Rattlesnake. With the help of his undergraduate mentors, Laary is studying the genetics of the highly venomous Tiger Rattlesnake.

Recent grants and publications by faculty and students are testament to our efforts to achieve our strategic goals. Our faculty, staff and students have worked hard to inspire and prepare the next generation to solve tomorrow’s biological challenges through innovative teaching, practices during her field research in the Florida Keys.

Please visit our website for more information and consider making a gift to Biological Sciences at Clemson as Give Day approaches later this month. If you have not already made your gift this year, I hope you will consider investing in our students and our department.

Thank you for your continued support and engagement with our department and with Clemson. Many of you are already donors and are proud to share examples of how your gifts are making a difference.

Best regards,
Saara J. DeWalt, Chair
Department of Biological Sciences
