Workforce Development Overview

The CINA Center offers a range of opportunities for students, educators, and professionals interested in workforce development. Our programs aim to prepare individuals for careers in critical infrastructure protection, cybersecurity, and related fields. Whether you're seeking to gain new skills, advance your career, or contribute to the nation's security, CINA offers a diverse array of options to help you succeed.

Join us for our upcoming events and workshops.

Distinguished Speaker Series

Maria Tillotson, "Open Source Data and Predictive Modeling for High-Density Crime Areas".

In this talk, Maria Tillotson will explore the use of open source data and predictive modeling techniques to analyze and predict high-density crime areas. She will discuss the challenges and opportunities presented by open source data and share insights into how these methods can be applied in real-world situations.
