The WWF is the global voice for the living planet. Their website is www.wwf.org, and their mission is to conserve nature and reduce the most significant threats to the diversity of life on Earth. They are a non-governmental organization with a focus on environmental issues such as climate change, conservation, and sustainable development. They work with governments, businesses, and individuals to create solutions to the biggest challenges facing the planet. Their goal is to protect the diversity of life on Earth and ensure that all species can continue to thrive. They work on a number of initiatives, such as protecting wilderness, reducing deforestation, promoting renewable energy, and protecting wildlife.

Their website has a wealth of information on climate change and wildlife protection. They provide news and updates on the latest developments in conservation efforts, as well as educational resources for schools and communities. They also offer virtual tours of nature reserves and wildlife habitats, allowing people to experience the beauty of the natural world from the comfort of their own homes.

WWF's campaigns and initiatives are designed to raise awareness about the importance of conservation and to inspire people to take action on a local and global scale. They believe that protecting the planet is everyone's responsibility, and they encourage individuals and organizations to get involved in their efforts to create a sustainable future.

UCSF Climate Health Dialogue

Summer is a time of growth, challenges and opportunities for reimagining the health emergency of our warming planet.

The Faculty, students, and staff community have engaged with the Dialogue in a variety of formats and with a diverse range of participants.

1. UCSF has the potential to serve as an international leader in education, research, clinical care and advocacy for the health of our warming planet, but we are still working to align our priorities and resources with this important goal.
2. Work in silos has inhibited collaboration among many dedicated and talented community members. There is a need to break down these silos and work together to address the complex challenges we face.
3. Solutions to global warming are also well-known solutions to health disparities.
4. The UCSF community needs enhanced pathways to translate Climate Health research into education and clinical care.
5. The UCSF Fossil Fuel Library contains a treasure trove of information, which ties in well with climate-related sustainability goals.
6. The UCSF Osher MiniMedical School for the Public: "The Health Emergency of Climate Change"

Events

Tuesday Evening: Rising Up, June 2nd

The Osher MiniMedical School for the Public is offering an evening event to discuss the climate crisis. The event will feature speakers from the UCSF community, who will discuss the impact of climate change on our health and provide actionable steps we can take to promote a healthier planet.

Opportunities for Action

We encourage all members of the UCSF community to take action on climate change. Whether it’s through volunteering, donating, or advocating for policy changes, there are many ways to get involved. You can also visit the Climate Health Links section to learn more about organizations and initiatives working on climate change.

---

Medical Students Call On Us To You for Climate Action & Health

March for Science in San Francisco with UCSF, students and faculty.

A call to action from the UCSF community, focusing on the importance of addressing climate change and its impact on health. The call urges people to engage in meaningful actions to address climate change and its health impacts.

Earth Day: April 22nd

Celebrating Earth Day with a focus on climate action and health. The day is dedicated to raising awareness about the importance of protecting the planet and the role we can all play in achieving a sustainable future.
