UCSF Climate Health Newsletter

Advancing Science, Building Bridges, Creating Community

May 2020

Welcome to the First UCSF Climate Health Newsletter

The University of California San Francisco is committed to climate health awareness and action. At UCSF, researchers, clinicians, educators, and students are constantly assessing environmental change and its impact on human and planetary health.

The Newsletter is co-founded by 4th year medical student Sarah Shear, learn how California physicians have been contributing important links.

A big thank you to the Office of Sustainability and Gail Lee for supporting the Newsletter’s production and for organization.

UCSF Climate Health Dialogue

Six lessons of pandemics, challenges and opportunities for tackling a vital response to the health emergency of our time

The trial, students, staff, faculty members have all been working together since the beginning of the pandemic as a way to bring people together.

Here are six common themes

UKSF had the privilege to operate as a national and international advocate, an opportunity that many other organizations, such as public health, youth organizations, universities, and academic institutions

May 15th, is cancelled. Depending on the status of COVID-19, the event may occur the first or second weekend of May.

The Spring Climate Health Event, sponsored by the Ad Hoc Academic Senate Committee on Sustainability, originally scheduled for May 15th, is cancelled. Depending on the status of COVID-19, the event may occur the first or second weekend of May.

The 60 faculty, students, staff, and community members who attended the Dialogue met together and in breakout groups to discuss Research, Education/Clinical Care and Advocacy.

The UCSF Fossil Fuel Library contains a treasure trove of information, which ties in well with climate-related policy change.

The UCSF Fossil Fuel Library contains a treasure trove of information, which ties in well with climate-related policy change.

Students, in particular, expressed enthusiasm for having a dedicated space for finding information and resources to make practicing medicine in a climate-conscious manner a common part of their education.

The UCSF community needs enhanced pathways to translate Climate Health research into education and opportunities at UCSF. By instituting a platform for Climate Health communication, the Newsletter aims to share this information and contributions from the reading room can be found here.

The 60 faculty, students, staff, and community members who attended the Dialogue met together and in breakout groups to discuss Research, Education/Clinical Care and Advocacy.

Prior to the pandemic, many faculty, students, and staff had been hard at work advancing Climate Health efforts at UCSF. The changing climate, with its associated threats of heat, floods, vector-borne diseases, displacement, and pandemics, was clearly the greatest public health threat of the 21st century. COVID-19 has served as a potent reminder, however, of the large-scale potential for pandemics to change life as we know it in a matter of days.

The pandemic has also had an impact on the ability of people to address Climate Health issues. Partnerships should be encouraged with multiple entities, such as public health, youth organizations, universities, and academic institutions.

Students, in particular, expressed enthusiasm for having a dedicated space for finding information and resources to make practicing medicine in a climate-conscious manner a common part of their education.
