The UCSF Climate Health Dialogue

It is widely understood that the changing climate is one of the greatest health threats our planet faces today. Yet the conversation about climate change and health is fragmented across the health care system, with many organizational silos inhibiting progress toward a healthier planet.

The UCSF Climate Health Dialogue, held in June 2019, brought together 60 faculty, students, staff and community health professionals to discuss strengths, challenges, and opportunities to reimagine and realign our relationships with the planet and with each other.

The 60 faculty, students, staff and community health professionals identified strengths, challenges, and opportunities to accelerate progress toward a healthier planet.
