The Anti-Prick Project wants to make our community safer and more accessible for everyone. Throughout campus. This will ensure students, faculty, trustees, alumni, and visitors can safely dispose of needles across campus, which leads to dangerous situations for all students – campus currently pose a public health and safety concern. The problem: Lack of options for the safe disposal of needles. The solution: The Anti-Prick Project. Our project began as a collaboration between a student and her professor, who together identified the issue and proposed a solution. The project has since grown to include additional team members and partners, and we continue to work towards making our community a safer place for everyone.
