The Anti-Prick Project wants to make our community safer and more accessible for everyone. Through campus. This will ensure students, faculty, trustees, alumni, and visitors can safely dispose of needles across campus, which leads to dangerous situations for all students – including injury and the spread of infectious disease. Those most at risk are our janitorial staff, who may get stuck with a needle disposed of in the trash.

Rajamohan’s ‘21 solution is to install safe, secure repositories in the high-use bathrooms throughout campus. This will provide a safe, secure receptacle for disposal of needles and help decrease the risk of injury to our janitorial staff.

Rajamohan’s ‘21 solution is to install safe, secure repositories in the high-use bathrooms throughout campus. This will ensure students, faculty, trustees, alumni, and visitors can safely dispose of needles across campus, which leads to dangerous situations for all students – including injury and the spread of infectious disease. Those most at risk are our janitorial staff, who may get stuck with a needle disposed of in the trash.

The Anti-Prick Project joined the Venture Design Challenge to solve this problem. Diayan, who is a member of the team, said “I was interested in this project because I wanted to help the janitorial staff avoid being stuck by needles.”

The Anti-Prick Project is one of the teams participating in the Venture Design Challenge, a competition that encourages students to develop innovative solutions to real-world problems. The challenge is open to all students and requires them to work in teams to create a prototype or business plan for their idea. The winning team will receive a $10,000 prize and the opportunity to pitch their idea to potential investors.

Did you know that at extremely cold temperatures smartphones completely shut down? This happened to Bob McKeon, a member of the Anti-Prick Project team, when he was using his phone to take a picture of the ski patrol truck. After the shutter released, his phone shut down for several hours. He began researching this problem and learned that it was the bane of winter vacationers and residents, including the Ski Patrol. After myriad attempts to fix his phone, he gave up and bought a new one. But the problem persisted, and he began to see it as a potential business opportunity. He wanted to help others who were facing the same problem and decided to start a company called TrueRemove.

TrueRemove is a mobile application that allows users to check their phones for hidden injuries and take appropriate action. The app uses a combination of GPS data and machine learning algorithms to identify areas of the body that may be injured and recommends the best course of action. Bob McKeon is currently working on a prototype of the app and plans to launch it later this year.

The Venture Design Challenge gives Lake Forest College students a unique opportunity to apply the skills and knowledge they have learned in ENTP courses to real-world problems. The competition is open to all students and requires them to work in teams to develop a prototype or business plan for their idea. The winning team will receive a $10,000 prize and the opportunity to pitch their idea to potential investors.

The topic: Boiling Point.

On Saturday, February 7th, the college hosted its annual TEDx talk to a sold-out crowd. The theme of the event was “The Power of Ideas,” and featured speeches by students, faculty, and community members on a variety of topics. The event was a great success, and the college is already planning for next year’s event.
