The Environmental Engineering Program at Mason University is now accepting applications for its 2020 Sustainability Scholarship Program. This scholarship seeks to support innovative and impactful research and projects related to sustainability, with a particular focus on areas such as micro/biology, environmental chemistry, and environmental geophysics.

The fellowship program is designed to encourage interdisciplinary research that crosses conceptual boundaries and supports the goals of the program. It is open to students from a variety of disciplines, including those interested in the biogeochemical reactivity of pollutants in the environment. Research on environmental sustainability is at the forefront of scientific inquiry, and the fellowship program seeks to support this work.

The fellowship provides funding of $8,000 for the duration of the fellowship year, along with a stipend of $500. This funding is intended to support the research and projects of the selected fellow.

The deadline for applications is March 1, 2020, and the fellowship is available to students from Mason University and other institutions in the region. The fellowship is open to undergraduate and graduate students, as well as postdoctoral scholars.

For more information, or to apply, please visit the fellowship website at gsscholar.org/apply. Mason University is committed to supporting the next generation of sustainability leaders, and we encourage you to apply for this fellowship.
